WORK EXPERIENCE

EPAM Systems

Nov 2021 – May 2022

Software Engineer

Izmir, Turkey

- Developed a customizable order management solution in Java by incorporating GraphQL APIs and backend components based on the client's business requirements.
- Designed and executed comprehensive API test scenarios using Postman, integrated unit tests, and analyzed and resolved production issues to improve overall system reliability.
- Collaborated in an international Agile team, clarified requirements through documentation analysis, and supported sprint delivery by managing Jira tickets.

C System Software Technologies

Apr 2021 – Jun 2021

Software Engineer Intern

Izmir, Turkey

- Engineered a full-stack customer feedback web application for evaluating proprietary software products.
- Implemented backend CRUD workflows and server-side validation using C# and ASP.NET MVC, and integrated the data layer with Entity Framework and Microsoft SQL Server.
- Developed the frontend with HTML, CSS, and JavaScript to create an interactive and responsive user experience.

Yokogawa

Aug 2019 – Sep 2019

IT Intern

Izmir, Turkey

- Supported day-to-day operations and maintenance of ICT infrastructure, including network upkeep, software rollout, and testing activities.
- Assisted with Windows Server Manager administration and domain integration of workstations.
- Configured Microsoft Hyper-V virtual machines to test technical specifications on Linux environments.

EDUCATION

University of Passau

Apr 2022 – Mar 2026

M.Sc. in Computer Science

Passau, Germany

Dokuz Eylul University

Sep 2016 – Jul 2021

B.Sc. in Computer Engineering

Izmir, Turkey

PROJECTS

RAG Documentation Assistant - Python, FastAPI, Next.js, React, Supabase

Mar 2026 – Apr 2026

- Built a full-stack Python/FastAPI backend integrated with a Next.js/React frontend to build a RAG pipeline that provides quick, and precise answers directly from FastAPI technical documentation.
- Configured LangChain for LLM integration and Supabase for vector storage; containerized the application with Docker for a reliable and consistent production environment.

PlaqueAnalyzer - Java, Spring Boot, JavaScript, PostgreSQL, Docker

Jul 2025 – Mar 2026

Master's Thesis Project

Passau, Germany

- Architected an interactive web application used by over 200 students to practice database schema normalization, implemented in Java/Spring Boot with PostgreSQL, and containerized with Docker.
- Implemented Server-Sent Events (SSE) to observe real-time computation updates and reduced computation time by up to 80% on large schemas using an adaptive Monte Carlo approximation.
- Delivered a CI/CD pipeline in GitHub Actions with automated JUnit testing for continuous deployment to Railway, and used AI-assisted development workflows to speed up prototyping and debugging phases.

The Art of War - C#, Unity

Oct 2020 – Jul 2021

Bachelor's Thesis Project

Izmir, Turkey

- Built a real-time strategy simulation game using Unity and C#, implementing unit combat mechanics and AI behaviors.
- Applied A* pathfinding, unit formations, and state-based reasoning algorithms to resolve complex technical scenarios.

SKILLS & LANGUAGES

Programming & Frameworks: Java, Python, C#, JavaScript, HTML, CSS, React, Spring Boot, FastAPI, ASP.NET, Next.js

Tools & Databases: Git, GitHub Actions, GitHub Copilot, AWS, Unity, Docker, GraphQL, Postman, Jira, REST APIs, Microsoft Hyper-V, PostgreSQL, Microsoft SQL Server, Supabase

Languages: English (C1), German (A2), Turkish (Native)
